The goal of the theory is to explain the mechanisms and processes by which the infant, and then the child, develops into an individual who can reason and think using hypotheses. To Piaget, cognitive development was a progressive reorganization of mental processes as a result of biological maturation and

environmental experience.

Jean Piaget's Theory and Stages of Cognitive Development ...

Social cognitive theory was developed by Stanford psychologist Albert Bandura. The theory views people as active agents who both influence and are influenced by their environment. A major component of the theory is observational learning: the process of learning desirable and undesirable behaviors by observing others, then reproducing learned behaviors in order to maximize rewards.
