The corrosion protective coating value chain consists of raw material suppliers, manufacturers, distributors, and end-use industries.

Corrosion protective is manufactured by mixing various resin materials with hardeners thereby imparting the value in addition to the basic coating.

PANI are developed by several groups of investigators. A PANI primer coat can act as an active electronic barrier to corrosion. In addition, the passivation of the metal surface is responsible for the protective activity of PANI. This was elucidated with potential and polarization measurements on stainless steel.
