Large photos of the Kindle books covers makes it especially easy to quickly scroll through and stop to read the descriptions of books that you're interested in.

Focused Innovations Sciences Gore

Gore is adding to it's range of affinity chromatography devices with the larger 9.0 mL size device for applications in process development, pre-clinical and early clinical drug development. This launch is significant because it demonstrates that this innovative membrane technology can be scaled to larger sizes without losing performance benefits.

Gore: New technologies, innovation efficiency — including some of the new developments that I've already mentioned — will help, but we've got to go into this with our eyes wide open. Applied Materials has told us that, has told the world that their studies indicate that we could actually see a very large increase in the amount of energy used for information processing and that makes this challenge even more urgent.
