times and cost estimates.

Basics of Software Development Process - Part 1 | BrowserStack

Software development life cycle (SDLC) is a series of steps that must be followed by a development team to develop and maintain software. SDLC life cycle starts with a decision to build software and ends with removing it from exploitation. It consists of a set of tasks required to complete at each stage of the development process.

Software Development Life Cycle: Phases and Models

The idea behind most software development projects is to automate something that is currently manually done in the world, or to create a new automated way to do something that was too difficult to do manually. Think about the word processing software I'm using right now. I happen to be typing this post using Google Docs.
