A radio-ligand assay for plasma estrone; normal values and variations during the menstrual cycle. J Clin Endocrinol Metab. 1970 Jul; 31 (1):76-80.

Hormonal characteristics of the human menstrual cycle ...

The menstrual cycle is the regular natural change that occurs in the female reproductive system (specifically the uterus and ovaries) that makes pregnancy possible. The cycle is required for the production of oocytes, and for the preparation of the uterus for pregnancy. The menstrual cycle occurs due to the rise and fall of estrogen. This cycle results in the thickening of the lining of the ...

Menstrual cycle - Wikipedia

Menstruation (period, menstrual cycle) is a process that a woman goes through each month. In the U.S., girls usually begin to menstruate around the age of 12, but the age range is about 8 to 15 years. Around the ages of 45 to 55, women usually no longer have periods. Women may experience problems with their periods, which can include heavy bleeding and painful periods.

Menstruation (Menstrual Cycle, Period)

Although the period of the human menstrual cycle can vary from 20 to 35 days, the average cycle lasts for 28 days. During this time, the female reproductive system carries out the processes of the menstrual cycle, which occurs in phases. The menstrual cycle begins in females at puberty, which takes place between the ages of 10 and 16.
