### 8.1 Introduction.

Numerical modeling is at present widely used to simulate the behavior of rockmass with or without rockbolting in various geotechnical projects. The numerical methods used in modeling of geomaterials include finite element method (FEM), boundary element method (BEM),

### MODELING CHANGE

Recall that the change  
can be modeled using  
the formula  $\text{change} =$   
 $\text{future value} - \text{present}$   
 $\text{value}$  . Change can  
take place over  
discrete or continuous  
time.
