TMJ disorders - Symptoms and causes - Mayo Clinic

Temporomandibular joint dysfunction (TMD, TMJD) is an umbrella term covering pain and dysfunction of the muscles of mastication (the muscles that move the jaw) and the temporomandibular joints (the joints which connect the mandible to the skull). The most important feature is pain, followed by restricted mandibular movement, and noises from the temporomandibular joints (TMJ) during jaw movement.

Temporomandibular joint dysfunction - Wikipedia

Temporomandibular Joint Disorders (TMJ & TMD) The temporomandibular joint (TMJ) is located in front of our ear where the skull and the lower jaw meet. The TMJ is the most constantly used joint in the body, allowing the lower jaw to move and function. Because of this high level of joint stress, injury and pain of the TMJ is not uncommon.

Temporomandibular Joint Disorders (TMJ & TMD)

An injury to the jaw or temporomandibular joint can cause TMD. A heavy blow, for example, can fracture the bones of the joint or damage the disc, disrupting the smooth motion of the jaw and causing pain or locking. Arthritis in the jaw joint may also result from injury and cause pain. Other causes of TMD are less clear.
