Transformer
capacitor with a known capacitance value, the charge in each capacitor can be found using the equation =.

For example: The voltage across all the capacitors is 10V and the capacitance value are 2F, 3F and 6F respectively. Charge in first capacitor is $Q_1 = C_1 * V_1 = 2 * 10 = 20$ C.

Transformer

For a 25V capacitor, you could use a voltage of 9 volts, while for a 600V capacitor, you should use a voltage of at least 400 volts. Let the capacitor charge for a few seconds. Be sure to connect the positive (red) lead from the voltage source to the positive (longer) capacitor terminal and the negative (black) lead to the negative (shorter
